

UREGROW[®]

UROLOGY CELL THERAPY

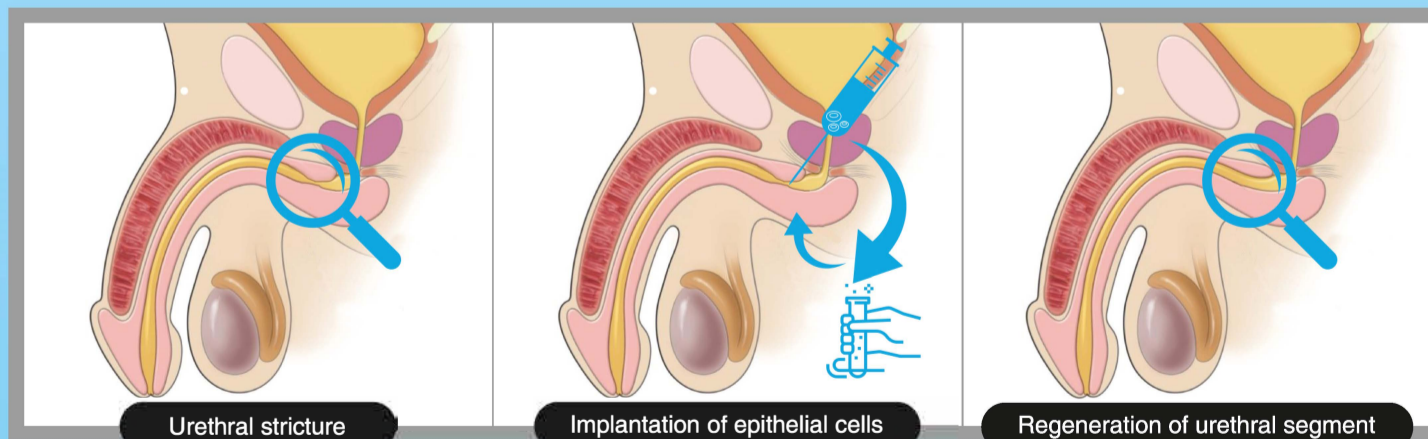

- **UREGROW**[®] is a biological & regenerative epithelial cell therapy indicated to treat urethral stricture
- **UREGROW**[®] is prepared from the patient's own cells (Autologous), which have the capacity to reconstruct the damaged layer of the urethra
- **UREGROW**[®] works by naturally regenerating stricture to reverse symptoms and restore full urinary control.

HOW DOES THE TREATMENT WORK?

UREGROW[®] is a one-time minimally invasive treatment provided by trained Urologists.

Epithelial cells from the patient's oral cavity are extracted and cultured in a GMP-certified laboratory.

The cells are then implanted at the stricture site to form a new epithelial tissue layer, relieving patient symptoms.

SAFE AND EFFECTIVE

- **UREGROW®** is entirely safe as it is prepared from patient's own cells
- Patients experience significant improvement in their urinary output & reduction of pain
- Safety and efficacy of **UREGROW®** are successfully proven through clinical trials in India
- **UREGROW®** is licensed for commercial use by the Drugs Controller General of India (DCGI), Ministry of Health and Family Welfare, Government of India

BENEFITS OF UREGROW®

- Natural & Biological reconstruction of Urethra
- Minimally invasive surgery
- Resumes normal urine flow
- Restores sexual function
- Scarless treatment
- Improves quality of life
